

Assignment Date	19 September 2022
Student Name	M bharat
Student Roll Number	962719106006
Maximum Mark	2 Marks

Question –1

1. Download the dataset:

	A	B	C	D	E	F	G	H	I	J	K	L	M
1	RowNumber	CustomerId	Surname	CreditScore	Geography	Gender	Age	Tenure	Balance	NumOfProducts	HasCrCard	IsActiveMember	EstimatedSalary
2	1	15634602	Hargrave	619	France	Female	42	2	0	1	1	1	101348.68
3	2	15647311	Hill	608	Spain	Female	41	1	83807.86	1	0	1	112542.56
4	3	15619304	Onio	502	France	Female	42	8	159660.8	3	1	0	113931.57
5	4	15701354	Boni	699	France	Female	39	1	0	2	0	0	93826.65
6	5	15737888	Mitchell	850	Spain	Female	43	2	125510.82	1	1	1	79084.1
7	6	15574012	Chu	645	Spain	Male	44	8	113755.78	2	1	0	149756.71
8	7	15592531	Barlett	822	France	Male	50	7	0	2	1	1	10062.9
9	8	15636146	Obinna	376	Germany	Female	29	4	115046.74	4	1	0	119346.89
10	9	15732365	He	501	France	Male	44	4	142051.07	2	0	1	74945.5
11	10	15592389	HP	684	France	Male	27	2	134603.86	1	1	1	71725.25
12	11	15767821	Beance	528	France	Male	31	6	102016.72	2	0	0	80161.12
13	12	15737173	Andrews	497	Spain	Male	24	3	0	2	1	0	76390.91
14	13	15632264	Kay	476	France	Female	34	10	0	2	1	0	26280.98
15	14	15691483	Chin	549	France	Female	25	5	0	2	0	0	190857.76
16	15	15600882	Scott	635	Spain	Female	35	7	0	2	1	1	65951.65
17	16	15643966	Guthrie	616	Germany	Male	45	3	143129.41	2	0	1	64327.26
18	17	15737452	Roman	653	Germany	Male	58	1	132602.88	1	1	0	5097.67
19	18	15788218	Henderson	549	Spain	Female	24	9	0	2	1	1	14406.41
20	19	15661507	Muldown	587	Spain	Male	45	6	0	1	0	0	158684.81
21	20	15568982	Hsu	726	France	Female	24	6	0	2	1	1	54724.03
22	21	15577657	McDonald	732	France	Male	41	8	0	2	1	1	170886.17
23	22	15597945	DeLuca	636	Spain	Female	32	8	0	2	1	0	138555.46
24	23	15699309	Gerasimov	510	Spain	Female	41	4	0	1	1	0	118913.55
25	24	15725737	Morgan	669	France	Male	31	3	0	2	0	1	8487.75

Question-2

2. Load the dataset.

Solution:

```
import numpy as np
```

```
import pandas as pd
```

```
df = pd.read_csv("/content/Churn_Modelling.csv")
```

Question_3

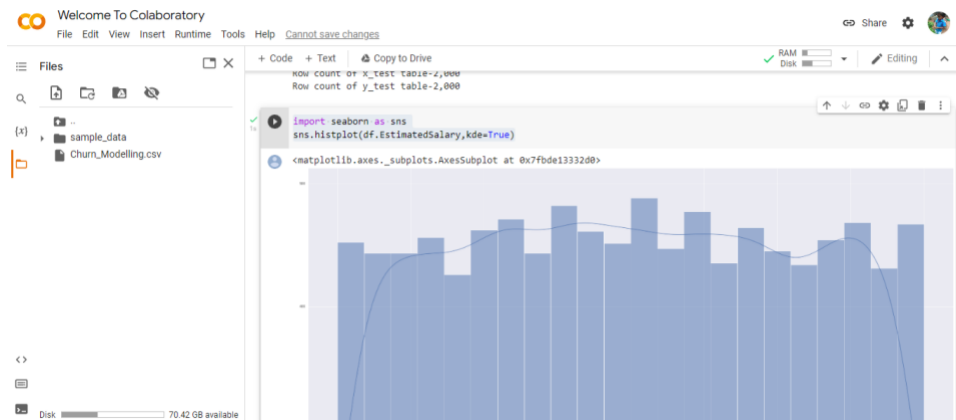

3. Perform Below Visualizations.

• Univariate Analysis

Solution:

```
import seaborn as sns
```

```
sns.histplot(df.EstimatedSalary,kde=True)
```

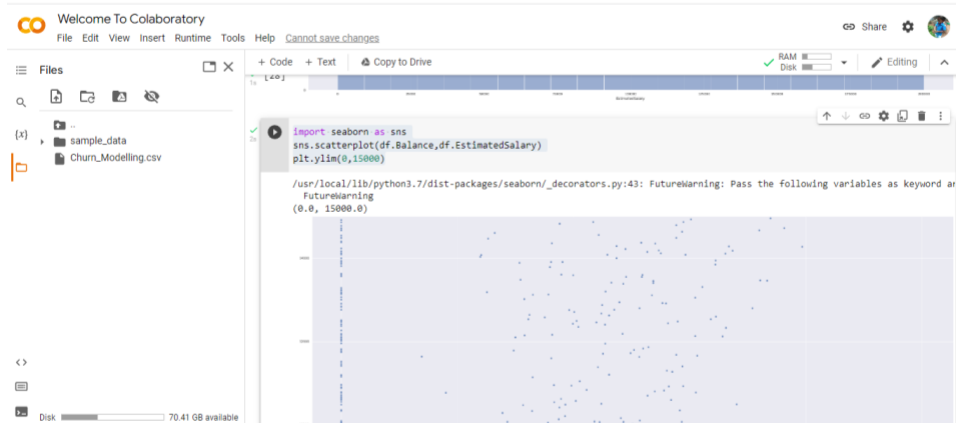

• Bi - Variate Analysis

Solution:

```
import seaborn as sns
```

```
sns.scatterplot(df.Balance,df.EstimatedSalary)
```

```
plt.ylim(0,15000)
```

● Multi - Variate Analysis

Solution:

```
import seaborn as sns
```

```
df=pd.read_csv("/content/Churn_Modelling.csv")
```

```
sns.pairplot(df)
```

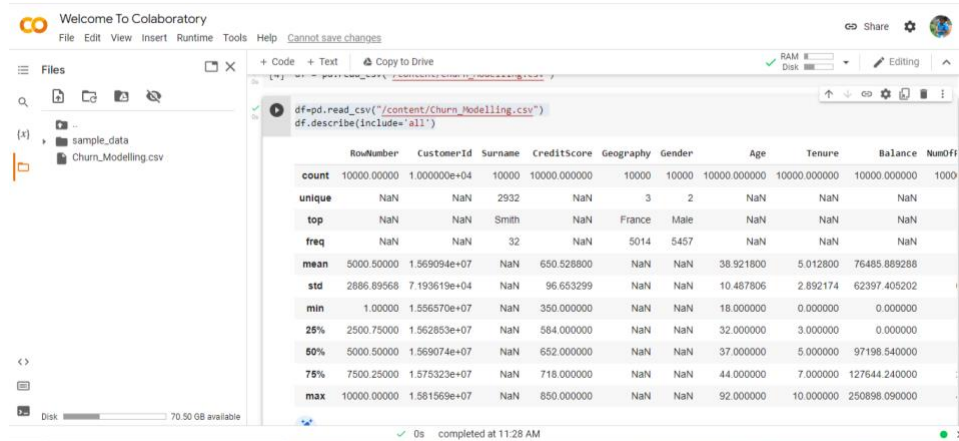

Question_4

4. Perform descriptive statistics on the data set

Solution:

```
df=pd.read_csv("/content/Churn_Modelling.csv")
```

```
df.describe(include='all')
```

Question_5

5. Handle the Missing values.

Solution:

```
from ast import increment_lineno
```

```
import pandas as pd
```

```
import numpy as np
```

```
import seaborn as sns
```

```
import matplotlib.pyplot as plt
```

```
%matplotlib inline
```

```
sns.set(color_codes=True)
```

```
df=pd.read_csv("/content/Churn_Modelling.csv")
```

```
df.head()
```

The screenshot shows the Google Colaboratory interface. The top menu bar includes 'Welcome To Colaboratory', 'File', 'Edit', 'View', 'Insert', 'Runtime', 'Tools', 'Help', 'Share', and a user profile icon. Below the menu is a toolbar with '+ Code', '+ Text', and 'Copy to Drive'. The left sidebar shows a file explorer with a folder named 'sample_data' containing a file 'Churn_Modelling.csv'. The main area is a code editor with the following Python code:

```
from ast import Increment_lineno
import pandas as pd
import numpy as np
import seaborn as sns
import matplotlib.pyplot as plt
%matplotlib inline
sns.set(color_codes=True)
df=pd.read_csv("/content/Churn_Modelling.csv")
df.head()
```

Below the code editor, a preview of the first five rows of the 'Churn_Modelling.csv' file is shown as a table:

RowNumber	CustomerId	Surname	Creditscore	Geography	Gender	Age	Tenure	Balance	NumOfProducts	HasCrCard	IsActive
0	1	15634602	Hargrave	France	Female	42	2	0.00	1	1	
1	2	15647311	Hill	Spain	Female	41	1	83807.86	1	0	
2	3	15619304	Onio	France	Female	42	8	159660.80	3	1	
3	4	15701354	Boni	France	Female	39	1	0.00	2	0	
4	5	15737888	Mitchell	Spain	Female	43	2	125510.82	1	1	

At the bottom, a status bar shows 'Disk 70.48 GB available' and '0s completed at 11:36 AM'.

Question_6

6. Find the outliers and replace the outliers

Solution:

```
import pandas as pd
```

```
import matplotlib
```

```
from matplotlib import pyplot as pyplot
```

```
%matplotlib inline
```

```
matplotlib.rcParams['figure.figsize']=(10,6)
```

```
df=pd.read_csv("/content/Churn_Modelling.csv")
```

```
df.sample(5)
```

The screenshot shows the bottom status bar of the Google Colaboratory interface, displaying 'Disk 70.47 GB available'.

Question_7

7. Check for Categorical columns and perform encoding.

Solution:

```
df=pd.read_csv("/content/Churn_Modelling.csv")
```

```
df.columns
```

```
import pandas as pd
```

```
import numpy as np
```

```
headers=['RowNumber','CustomerID','Surname','CreditScore','Geography',  
         'Gender','Age','Tenure','Balance','NumofProducts','HasCard'  
         'IsActiveMember','EstimatedSalary','Exited']
```

```
import seaborn as sns
```

```
df.head()
```

Question_8

8. Split the data into dependent and independent variables.

Solution:

```
x=df.iloc[:, :-1].values
```

```
print(x)
```

```
y=df.iloc[:, -1]._values
```

```
print(y)
```

Question_9

9. Scale the independent variables

Solution:

```
import seaborn as sns
```

```
df=pd.read_csv("/content/Churn_Modelling.csv")
```

```
dff=df[['Balance','Age']]
```

```
sns.heatmap(dff.corr(), annot=True)
```

```
sns.set(rc={'figure.figsize':(40,40)})
```

Question_10

10. Split the data into training and testing

Solution:

```
from scipy.sparse.construct import random
```

```
x=df.iloc[:, 1:2].values
```

```
y=df.iloc[:,2].values
```

```
from sklearn.model_selection import train_test_split
```

```
x_train, x_test, y_train, y_test=train_test_split(x,y,test_size=0.2,random_state=0)
```

```
print('Row count of x_train table'+ '-' +str(f"{len(x_train):,}"))
```

```
print('Row count of y_train table'+ '-' +str(f"{len(y_train):,}"))
```

```
print('Row count of x_test table'+ '-' +str(f"{len(x_test):,}"))
```

```
print('Row count of y_test table'+ '-' +str(f"{len(y_test):,}"))
```
